

Chun Hui (External) 10:06 am  
 like for example, we want to hide all the columns from the structural model  
 if it has column in both arch/ structure or in our model  
 it has to use filter to control  
 we have to check what workset or parameter of structural column we can use to filter  
 a few process  
 oh, another good thing  
 if we can see when was it updated  
 and we can turn on or off the workset of the link  
 btw, just add any of these are already good  
 since the built in are not easy to do it

Chun Hui (External) 9:47 am  
 is there any more function?  
 I'm adding Revizto link data importing, load and unload, and automations for Architectural copy monitoring.  
 9:47 am  
 There will be. I made it  
 And exporting of reports.

Chun Hui (External) 9:57 am  
 the filter cannot control it  
 Kyle Vorster 17/07/2025 9:57 am  
 Always an issue... depending on how Arc models it  
 yes, and nested family is not to control with filter  
 like we always find problem when we want to change the linked door color to be grey  
 the line or detail item nested in the door family  
 it cannot be controlled

Chun Hui (External) 9:53 am  
 oh another thing  
 Kyle Vorster 17/07/2025 9:53 am  
 worksets are easy enough. Not sure about individual categories yet.  
 for some reason  
 if you put the link model into a workset, you use workset and category filter to control  
 its not working  
 oh another thing, managing the linked cad is a good idea  
 people always find problem when linking the cad  
 like the view range problem, instance, scale, coordination
